Weekly Market Updates (Nov 2 - Nov 6, 2026)

Part 1. Market Performance

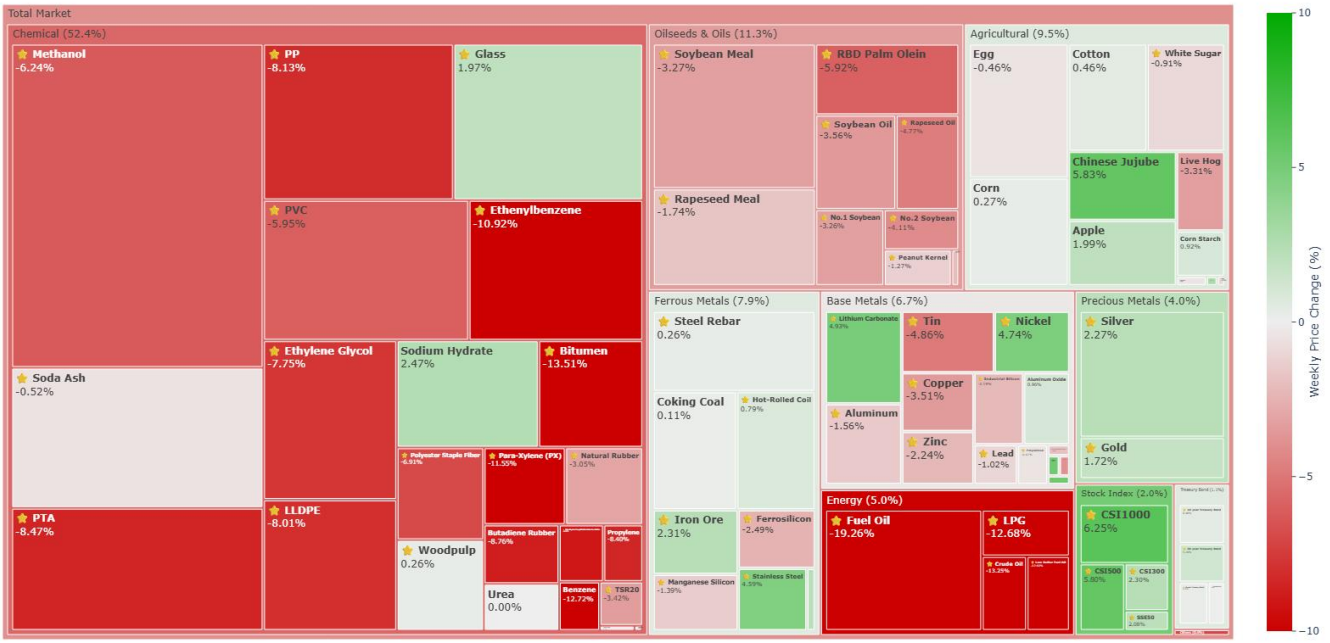

• Liquidity and Market Activity Overview

Weekly Top 20 Commodity Futures by Trading Volume & Turnover					
Rank	**Product**	**Daily Avg. Volume Change WoW (%)**	**Daily Avg. Volume this week (lots)**	**Daily Avg. Volume last week (lots)**	**Price Change WoW (%)**
1	Tin	83.10%	390,243	213,136	-4.86%
2	Copper	67.04%	290,345	173,823	-3.51%
3	Gold	56.31%	424,432	271,539	1.72%
4	Stainless Steal	47.07%	281,529	191,425	4.59%
5	Silver	45.19%	1,290,839	889,092	2.56%
6	Rapeseed Meal	34.96%	1,032,056	764,725	-1.74%
7	Rapeseed Oil	25.55%	390,105	310,721	-4.77%
8	Nickel	24.58%	317,215	254,636	4.74%
9	Glass	24.06%	1,796,758	1,448,256	1.97%
10	Industrial Silicon	23.44%	244,682	198,219	-2.19%
11	Zinc	17.89%	261,735	222,017	-2.24%
12	Egg	16.51%	876,620	752,389	-0.46%
13	Methanol	16.00%	4,957,164	4,273,317	-6.24%
14	Crude Oil	14.25%	241,203	211,127	-13.25%
15	PP	13.79%	1,806,540	1,587,546	-8.13%
16	LLDPE	13.53%	1,063,354	936,618	-8.01%
17	Lithium Carbonate	7.41%	484,015	450,614	4.93%
18	Apple	6.83%	464,961	435,240	1.99%
19	Steal Rebar	5.75%	856,029	809,458	0.26%
20	Soda Ash	4.85%	2,144,959	2,045,671	-0.52%
Rank	**Product**	**OI Change WoW (%)**	**OI this week (lots)**	**OI last week (lots)**	**Price Change WoW (%)**
1	Stainless Steal	34.70%	219,794	163,178	4.59%
2	Rapeseed Meal	27.58%	1,386,045	1,086,434	-1.74%
3	Ferrosilicon	16.78%	461,948	395,561	-2.49%
4	Peanut	16.11%	344,962	297,091	-1.27%
5	Copper	13.88%	617,270	542,044	-3.51%
6	White Sugar	11.33%	1,079,324	969,516	-0.91%
7	Egg	11.02%	623,317	561,426	-0.46%
8	Soda Ash	9.71%	2,068,160	1,885,143	-0.52%
9	Methanol	9.67%	1,859,039	1,695,171	-6.24%
10	No.2 Soybean	9.40%	378,296	345,792	-4.11%
11	Chinese Jujube	9.05%	371,755	340,893	5.83%
12	Para-Xylene	9.04%	253,410	232,397	-13.13%
13	Polyester Staple Fiber	8.92%	307,666	282,482	-8.92%
14	Manganese Silicon	7.71%	607,142	563,679	-1.39%
15	Cotton	7.54%	1,129,448	1,050,257	0.46%
16	Live Hog	7.38%	483,192	450,003	-3.31%
17	Tin	5.51%	84,410	80,000	-4.86%
18	Industrial Silicon	5.08%	375,699	357,541	-2.19%
19	Nickel	3.68%	345,230	332,976	4.74%
20	Propylene	3.53%	41,792	40,368	-8.40%

** Weekly trading volume and open interest refers to the sum of total contracts for that product over the past week; Price change specifically refers to the price movement of the most active contract. The trading volume covers the period from Nov 2nd to Nov 6th, with trading volume and open interest changes comparing data from this week to last week. Commodity futures with a weekly trading volume of less than 100,000 lots are not included. The data is sourced from Wind and compiled by Galaxy Futures.*

Part 2. Exchange Announcements

- **Exchange Release**

Nov 6 ZCE Notice on the Listing of Sunflower Seed Oil Futures and Options

More Info - CZCE
More Info - CZCE

Nov 6 GFEX - Notice on the Release of the Contract Rules for Lithium Hydroxide Futures and Options

More Info - GFEX

Part 3. Market News

- **Market Updates**

Nov 6 CSRC Notice on the Approval of Sunflower Seed Oil, Lithium Hydroxide Futures and Options Registration

The CSRC just approved the registration of sunflower seed oil, lithium hydroxide futures and options on the ZCE and GFEX, respectively. Following this registration, China futures market now features 168 listed products, comprising 94 futures and 74 options.

Nov 2 Monthly Trading Volume & Turnover in China Futures Market - October. 2026

1. Monthly Trading Volume and Turnover for Futures and Options Products in October 2026 - YoY of 50.08%↑and 10.71%↑.

China futures market recorded a trading volume of 904 million lots and a turnover of 67.78 trillion yuan in October 2026, representing YoY increase of 50.08%↑ and increase of 10.71% ↑, respectively.

(More Info)

Part 4. Summary and Strategy at a Glance

• Precious Metal

Gold/Silver: Last week's main thread was the midterm shock first, then employment data surprises. After the November 4 Democratic sweep, the U.S. dollar index fell to a one-month low near 101.25; spot gold surged over 3% in a single day back above $4,000. But on November 6, October nonfarm payrolls came in at 165,000 (vs 65,000 expected), and the unemployment rate fell to 4.1%; December 25bp hike odds quickly rose to 80%, the dollar strengthened sharply, and gold fell in tandem. Geopolitically, the U.S.-Iran situation kept reversing, alternating with macro factors. Post-election easing hopes were reversed by events such as the tanker mine strike; geopolitical risk persists. ***Insights:*** *short-term macro pressure relatively large; gold seen range-bound.* ***Strategy:*** *Mainly sell rallies; long gold-silver ratio; long platinum-palladium ratio.*

• Financial Derivatives

Equity Index Futures (IF/IC/IM/IH): Event-driven week with large swings. Early week: financial authorities arranged two structural monetary tools, bringing incremental funds. The U.S. midterm outcome triggered a heavy-volume rally. State Council meeting improved the capital-market stabilization mechanism; the PBOC's third swap facility batch entered, with intended applications exceeding 100 billion yuan. Overseas markets fell sharply; A-shares withstood the test. CSI 300 +1.65%, SSE 50 +1.73%, CSI 500 +5.28%, CSI 1000 +5.59%. Media (+13.4%) and power equipment (+9.3%) led; coal (-6.0%) and telecom (-6.4%) lagged. ***Insights:*** *Range-bound with upward bias; buy dips.*

CGBs Futures (T/TF/TS/TL): October official manufacturing PMI back below 50 (49.3%); weak short-cycle recovery continues. High-frequency data suggest foreign trade may stay strong but turning point near; domestic demand lacks highlights; property sales seasonally down; resident travel weaker. 10Y yield broke below 1.6% to record low. But PBOC's medium/long-term liquidity stance turning cautious—

3-month outright reverse repo rollover cut by 200 billion yuan, though winning rate reportedly down 5bp; October net government bond purchases hit record 150 billion yuan. Equity turnover showing signs of bottoming; if policy support and external risk appetite recovery resonate, bond sentiment may be pressured. ***Insights:*** *Fundamentals still support bonds, but yields at new lows, PBOC cautious, risk appetite may recover.* ***Strategy:*** *Take partial profits on TL, hold light; try tactical short T/TL calendar spread trades.*

• Non-Ferrous Metal

Copper: Macro and fundamentals diverge sharply. Democrats swept the midterms, sparking fears of tighter AI/data-center regulation; the semiconductor index plunged and copper, with its AI link, fell below $14,000/t. Fundamentals remain strong: social inventory just 62,500t (vs 203,300t a year ago), warrant inventory 6,574t, spot premium above 2,500 yuan/t, Nov-Dec spread over 2,000 yuan/t. Concentrate TC still at -$247/t, smelter losses rising, November output seen falling further. Buyers stepped in below $14,000 but cooled as premiums rose. ***Insights:*** *Bearish sentiment released quickly; strong fundamentals limit downside. Medium-term, higher imports after 232 tariff expectations fade, easing supply tightness, plus AI slowdown fears add macro pressure.* ***Strategy****: Sell rallies; resistance at $14,000/t.*

Aluminum: Macro pressure eased after the Democratic win. Billet output rising since National Day, ingot casting low, arrivals scarce; shipments steady at 130-150kt, destocking to continue in November. Refined-scrap spread narrowing, scrap tightness supports primary demand. LME 0-3 premium rising; continuous destocking supports backwardation. Overseas supply rising—Indonesia, Vietnam's Dak Nong phase two early commissioning. ***Insights:*** *Near-strong, far-weak structure shows in spreads and basis; absolute prices may stabilize as macro pressure eases.* ***Strategy:*** *Short-term stabilization; re-enter long aluminum calendar spread; sell rallies in Q4; sell OTM calls.*

Zinc: Domestic TC flat at -2,350 yuan/t, import TC down to -$167.5/dmt; mine supply-demand unchanged. Northern mines entering seasonal shutdowns, but November refined output seen +4.64% MoM to 566,600t. Terminal demand clearly weaker in November; downstream operation rate falling, buying light on bearish sentiment. SMM seven-region inventory 179,100t, -47,000t WoW. ***Insights:*** *Ahead of mine-smelter TC talks, wide-range. Mine tightness strongly supports smelting costs; buy dips. Range 25,000–27,200 yuan/t.*

Nickel: Democrats' win may bring long-term new-energy policy support; prices rebounded on short covering. Indonesia signals tighter RKAB quotas; Bloomberg reports three mines plan to cut Indonesian output next year—supply-tightening expectations fueled a sharp rally. But quotas are always tight-then-loose; over-speculation likely. Nickel and sulfur prices still falling, lowering cost support. Demand weak: ternary schedules in off-season, sulfate buying light; stainless November schedules revised up, NPI demand recovering marginally. Refined nickel inventories fell notably, supporting prices. ***Insights:*** *Firms to keep cutting output and destocking into year-end, but macro risks and high Indonesian policy uncertainty remain; sharp rallies may offer hedging profits, capping upside.* ***Strategy****: Short-term*

rebound, watch pullback risk; range-bound; protective options.

Tin: Fed officials hawkish, December hike odds near 80%; Democratic win plus AI giants' earnings misses led to reassessment of AI capex returns, tech selloff pressured tin. Myanmar ore imports -29.67% MoM in September, partly offset by Malaysia (+47%), Laos (+116%), and DRC. October refined output 8,615t, -46.39% MoM, mainly Yunnan Tin maintenance. SMM social inventory 5,171t, -1,171t WoW; LME 3,885t. Trading dull, small rigid-demand buys; holders reluctant to sell low, marketable supply tight. ***Insights:*** *Fears of slower AI infrastructure buildout; the AI-driven rally has temporarily ended.* ***Strategy:*** *Prices under pressure; stay on the sidelines.*

Lithium Carbonate: October extended the downtrend, breaking 100,000 yuan/t. Mica and recycled output stayed low; spodumene-based refiners generally underwater. Demand—Sep–Oct downstream scheduling growth missed; November scheduling down nearly 5% MoM. Market shifts from "supply guarantee" to "destocking.". ***Insights:*** *Range-down to find support, then a possible sharp oversold rebound. Far months turn resilient at low prices; be very cautious shorting. Watch the Shixiawo mine restart.*

• Ferrous Metals

Steel: On the supply side, rebar output this week was 1.859 million tons (+47,200), hot-rolled coil output was 2.9128 million tons (+31,900), and daily hot metal output was 2.3069 million tons (-11,800), with steel mill profits on the low side. Electric furnace flat electricity profit is -63.67 yuan/ton, and valley electricity profit is +101 yuan/ton. On the demand side, rebar apparent demand was 2.008 million tons (-52,700), with construction steel demand declining seasonally; hot-rolled coil apparent demand was 2.9717 million tons (+16,100), with overseas restocking demand improving and flat products outperforming construction products. On inventory, total rebar inventory fell 149,000 tons, and total hot-rolled coil inventory fell 58,900 tons, with destocking slowing. New housing starts and construction declines narrowed, but sales and completions declines continued to expand. October official manufacturing PMI was 49.3%, falling back below the boom-or-bust line. ***Insights****: The earlier market trading of the bearish factor of November raw material supply growth has been exhausted, and a bottom rebound has appeared. However, if hot metal production resumes and demand continues to weaken, steel will again face pressure.* ***Strategy:*** *Short-term range-bound with an upward bias; enter basis arbitrage reverse trades on rallies; buy the rebar-HRC spread on dips.*

Iron Ore: Ore prices bottomed and rebounded this week, with market expectations improving. On the supply side, year-end imported ore may decline YoY, but the high port inventory pattern remains unchanged. On the demand side, positive signs have emerged—overseas demand is being released faster after being deferred, domestic manufacturing steel demand continues to improve, September exports continued to beat expectations, and direct and indirect net exports of iron elements continue to contribute increments. June-August may have been the worst period for domestic manufacturing steel demand, and the year-end improvement is expected to continue. ***Insights:*** *Bottom-fishing in ore prices is intensifying, with significant capital and sentiment disturbances. As the year-end approaches,*

optimistic demand signs are expected to be further confirmed. ***Strategy****: Range-bound with an upward bias on a single-leg basis; enter 1/5 spread arbitrage at lows; option knock-out accumulator purchases.*

• Energy & Chemicals

Crude Oil: Oil prices fluctuated sharply this week. In the first half of the week, rising expectations of U.S.-Iran peace talks combined with the Democratic victory led the market to believe that the political cost to the U.S. government of expanding war against Iran had risen and that controlling inflation had become more important. Geopolitical longs took profits in a concentrated manner, and risk premiums were quickly withdrawn. In the second half of the week, Iran said an oil tanker and a tugboat struck mines and caught fire, triggering short covering and re-elevating short-term risk premiums. The market has not fully eliminated the tail risk of U.S.-Iran conflict escalation; during the political vacuum, both escalation and de-escalation are highly possible. ***Insights:*** *The high-volatility pattern continues. Strategy: Brent expected at $85-105/barrel; go long monthly spreads; take profits on long volatility positions.*

LNG: Last week, signals of de-escalation in the U.S.-Iran conflict combined with the Democratic victory strengthened market expectations for the end of the war, and prices fell sharply. However, fundamentally, the logic of extreme supply tightness in the heating season before Qatari LNG returns remains unchanged, and the probability of Qatari LNG immediately resuming exports in November is still low. If the Strait of Hormuz is not opened, there is no realistic possibility of Qatari gas actually returning, and this week's decline is expected to be repaired quickly. On weather forecasts, temperatures in Europe and Asia in November are generally stable, with no obvious warmer or colder signs, and the possibility of a short-term explosive rally is relatively weak. European inventory is 73.75% (clearly lower than 83.02% a year earlier), and LNG stranded at sea for more than 30 days is about 2.16 million tons, 59% above the five-year average. ***Insights:*** *Future upside space depends on winter temperatures and the duration of the Qatari supply cutoff.* ***Strategy:*** *Hold JKM/TTF longs; aggressive winter target of $35/MMBTU; HH range-bound with a downward bias; JKM and TTF spread arbitrage.*

Polyester Chain: Affected by Middle East geopolitical peace talk signals and the Democratic victory, crude oil fell sharply, and plastics PP fell sharply. However, spot declines were significantly smaller than the board, basis strengthened markedly, and basis and monthly spreads are at high levels for the same period in previous years. Inventory accumulated MoM but is low YoY. PE operating rates rose MoM, while PP operating rates fell MoM, both at low levels for the same period. New plant commissioning has been generally delayed, and new capacity pressure on the 2701 contract is limited. On the demand side, downstream product operating rates fell MoM and are low YoY. ***Insights:*** *The current situation is high basis, low inventory, low operating rates, delayed new plant commissioning, weak supply and demand, and geopolitics remains the dominant factor. Strategy: Short-term range-bound; medium- to long-term focus on the pace of new plant commissioning and the strength of existing operating rate recovery.*

Rubber: Butadiene rubber weekly output rose to 33,900 tons (+5.37%), capacity utilization at 73.52%, oversupply, and profit inversion at -877 yuan/ton. Natural rubber domestic production areas are seeing

seasonal production cuts, with weekly output of 28,000 tons (-34.58%), while overseas production areas are gradually increasing output. Social inventory is 1.08 million tons (-2.1%), with obvious destocking in the Qingdao bonded zone. El Niño has reached super strong event standards, but its marginal impact on rubber is weakening. Crude oil geopolitical premiums have fallen, and fundamentals are insufficient to support a one-way rally. ***Insights:*** *Weak operation. Strategy: RU/NR/BR main 01 contracts weak; stay on the sidelines for arbitrage and options.*

• Agriculture

Corn/Starch: The October USDA report was bearish for U.S. corn, but U.S. corn supply is lower than last year, so downside space is limited, with support around 440 cents/bushel. In China, farmers in the northeast have a strong reluctance to sell, corn rose without volume, and ports followed upward. Corn arrivals in North China decreased, and spot prices continued to rise. National grain sales progress is slower than last year (18% vs 22%), and selling pressure remains at the end of November. For starch, operating rates rose to 62.65% (+4.43%), inventories are high at 1.348 million tons, and profits declined (Shandong -80 yuan/ton, Heilongjiang -10 yuan/ton). ***Insights****: Farmers' reluctance to sell is pitted against selling pressure expectations.* ***Strategy****: Short 01 corn above 2,330; look to narrow the corn-starch spread on rallies.*

Sugar: Crude oil declines, BRL depreciation, and strong Indian sugar output drove raw sugar weaker. Southern Chinese sugar mills have started crushing, new sugar is gradually coming to market, and demand has no highlights. ***Insights:*** *Range-bound with a downward bias.* ***Strategy:*** *Stay on the sidelines; watch El Niño's impact on sugar output.*

Oils (Soybean, Palm, Rapeseed): For palm oil, October Malaysian palm oil supply and demand are expected to both increase, with inventories continuing to hit record highs (Reuters/Bloomberg estimate about 3.75 million tons), and domestic inventories are also continuously accumulating. For soybean oil, soybean supply is ample, oil mill crushing volumes remain at a relatively high level, and soybean oil inventories are at a high level for the same period. Rapeseed oil has relatively lower inventories among the three major oils, but as Australian seed purchases increase, far-month rapeseed arrivals increase, bringing marginal easing expectations, and rapeseed oil may see significant inventory buildup. Indonesia lowered its November export reference price to $978.9, with the export tax cut from $178 to $124. ***Insights:*** *In the short term, oils are in a bottoming-out oscillation stage, lacking obvious upward drivers.* ***Strategy:*** *Temporarily stay on the sidelines or conduct small range-bound buy-low-sell-high operations; watch MPOB and USDA monthly report guidance.*
